PROFILE

Information Systems Engineer with six months of professional experience as a Full Stack Software Developer. I have contributed to real projects under agile methodologies, with collaborative workflows and code review before production. Honest, transparent and committed, quick to pick up new technologies and ready to take initiative within a team.

PROFESSIONAL EXPERIENCE

Full Stack Software Developer

Orlando Caterers & Commissary

Dec. 2025 – Present

Remote – Orlando, FL

- Built full stack features with PHP on the backend, React on the frontend and MySQL as the database, on Linux environments and Docker containers.
- Contributed to projects under Scrum and Kanban, with Pull Request review by the QA team before deployment to production.
- Implemented a GitHub workflow with feature branches, integration into a development branch and promotion to production through the main branch.
- Developed multi-domain websites and held recurring meetings with English-speaking clients to present features and gather requirements, strengthening my technical communication in English.

EDUCATION

B.Sc. in Information Systems Engineering

Universidad Nacional de Costa Rica

2022 – Jun. 2026

Heredia, Costa Rica

- Coursework completed in June 2026 (degree to be conferred in November 2026). Training in software development, object-oriented programming, architectural patterns (MVC, MVVM), databases and agile methodologies.

PROJECTS

SkillLink — Web and Mobile Application

React, PHP, MySQL

- Application for finding service professionals (plumbers, electricians, among others) through geolocation, with integrated chat, appointment scheduling, and management of each professional's services and credentials.

KapiBook — Multi-tenant Appointment System

React, NestJS

- Appointment management system for multiple businesses, with an independent database per company, per-client customization, email and WhatsApp notifications, and an admin panel to manage professionals, schedules and services.

Carnicería La Bendición — E-commerce Web System

PHP, MySQL

- Ordering module for customers and an admin panel to manage products, categories, users and orders.

TicoWallet — Mobile Finance App

Kotlin, .NET, SQL Server

- Finance application built with Kotlin, .NET and SQL Server.
